

The Deciding Edge
in Reproductive Science Intelligence

PracticeHwy.com

Define, document, and manage multiple treatment protocols
Create customized cycle (IUI, IVF, ICSI, GIFT, ZIFT, Thaw, EEP, GEEP) flowsheets and reports
Schedule clinical orders and procedures from flowsheets and view treatment results
Integrate information on retrievals, fertilizations, embryo development, transfers, and outcomes
Schedule, document, administer, and manage:

- Patient evaluations and diagnosis
- Ovulation induction
- Cycle monitoring (follicular development, hormone levels)
- Sperm testing and morphology
- Triggers
- Egg retrievals
- Inseminations
- Fertilizations and assisted hatchings
- Gamete sheets
- Embryo and blastocysts (culture, development, grading, transfers)
- Cryopreservation (sperm, embryo, blastocysts)
- Sperm and embryo inventory
- Thawing (sperm, embryo, blastocysts)
- Outcomes (treatment, pregnancy)

Effortlessly analyze practice data and share information
Seamlessly connect with your enterprise systems, including billing and LIS
Easily communicate with your staff, colleagues, partners, and patients
Painlessly comply with regulatory requirements (SART, HIPAA) and generate reports
Swiftly test research hypotheses and analyze your outcomes
...With a click. Any time. Any Place.
